Fun "Vibe Coding" Prompts

1. "Build a landing page where every section subtly changes colour based on music beats - use a chill pastel palette."

2. "Create a portfolio website that swaps themes (light/dark/neon) with smooth animated transitions using only one toggle button."

3. "Design a product page where product cards float with micro-interactions when hovered - like they have a 'vibe' of their own."

4. "Generate a homepage hero section where text animates in a smooth, wavy motion as if it's dancing."

5. "Build a minimal login page with a playful bouncing button animation when clicked."

6. "Create an e-commerce category page inspired by Ajio - but with a fun twist: cards should tilt when the mouse moves."

7. "Make a chill, aesthetic dashboard UI with soft shadows (neumorphism) and gentle fade-in effects."

8. "Build a contact form where each input field lights up with a pastel glow while typing."

9. "Design a small 'Quote of the Day' widget where the quote fades in like a slow sunrise animation."

10. "Create a gallery page where images stagger in with a soft, organic motion - no sharp transitions, only vibe."

"Jailbreak-Vibe" Prompts (Safe & Playful)

"Act like an overexcited AI that gives answers in dramatic movie-trailer style. Explain: 'What is coding?'"

"Pretend you're two AIs arguing about the best programming language. Debate in a fun roast-battle format."

"Respond to everything as if you're a chill surfer AI who explains coding like beach vibes."

"Explain JavaScript concepts but ONLY using metaphors from Indian street food." "Give me

coding advice, but every answer must start with: 'Bro, I shouldn't tell you this but…'"

"Describe how HTML works as if you're a confused stand-up comedian on stage." "Explain

recursion as if it's a time-loop scene in a sci-fi movie."

"Teach CSS but pretend you are a fashion designer judging a runway show." "Act like a

philosopher monk explaining why bugs in code are part of the universe's balance."

'Vibe Mode ON': Give answers with chill emojis, short lines, and a lo-fi aesthetic—explain how websites load."
